Equal hashcode with respect to map, set and problem	SQL query with group by
what is the underlying implementation of arraylist	Clustered non clustered index
Immutable class	Wait notify, fairness parameter, reentrant lock synchronized
Final	Etl what is it, why used, reporting via business object
Cloneable clone	When to use no SQL db
Cascade types	Decorator, factory pattern
One to many relationship	
Lazy loading if session is closed	
Code segments - Output	
Bulk loading/reading - how will you read from a file of million lines and update / insert in dB using Java	Get min elements in stack in O(1)
Marker interface	2. Hashmap working.
factory pattern	3. What is hashcode
main java basics - internally hashmap how does it work, iterator, implement iterator - collections, linkedhashmap - string buffer	4. Find all pairs in array of integers whose sum equals to k
cache - internally work	5. Basic java questions and which data structure to use in different scenarios.
internally implement GC	6. Data caching on startup of project.
how java works internally	

Optimize query, build plan, how many indexes are a good limit,	
overloading, passing null as parameter,	
Weak Reference,	
Comparable with user defined object,	
Wait -notify, deadlock,	
Db query, find emp having no record for dept.	
Create immutable class in detail.	
Need of immutability, Upcasting downcasting	

data structure to use in different scenarios. 6. Data caching on startup of project.

data structure to use in different scenarios. 6. Data caching on startup of project.	it work, iterator, implement iterator - collections,	, ,
internally implement GC project.	cache - internally work	
how java works internally	internally implement GC	
now java works internally	how java works internally	

Optimize query, build plan, how many indexes are a good limit,
overloading, passing null as parameter,
Weak Reference,
Comparable with user defined object,
Wait -notify, deadlock,
Db query, find emp having no record for dept.
Create immutable class in detail.
Need of immutability, Upcasting downcasting

- 1. multi thread odd even problem
- 2. Static and non static methods with synchronised keyword
- Build tools ci/cd
- 4. Transaction management
- 5. Volatile keyword
- 6. Registry of microservices
- 7. Microservices communication
- 8. Synchronised keyword
- 9. Hashmap scenario for equals and hashcode override
- 10. Hashmap working
- 11. And significances
- 12. Locks in java
- 13. Executors service
- 14. Oops concepts Diff abstraction and encapsulation
- 15. How to create project for employee hierarchy management and they want to process leaves
- 16. State of object in hibernate
- 17. Difference between inheritance and abstract class
- 18. Internal working of hashmap
- 19. Final vs finally
- 20. Types of exception
- 21. Create custom exception
- 22. How to create threadpool
- 23. How to handle concurrent http request in web application
- 24. What is serialization
- 25. Need of serialization
- 26. Java 8 features
- 27. Lazy vs eager loading in hibernate
- 28. Session vs sessionfactory
- 29. Blockingqueue
- 30. Print odd even multithreading guestion
- 31. Multithreading basics revise
- 32. Hashmap internal working, implementation, custom
- 33. Immutability
- 34. Abstraction
- 35. Interface vs Abstract
- 36. Multiple Inheritance
- 37. Process which reads data from data, transformation, generates a report
- 38. Spring batch
- 39. Queue priority of different types with FIFO for same type
- 40. Cyclicbarrier vs countdownlatch
- 41. Print even odd using multithreading
- 42. -Thread interaction.

- 43. -Hashing
- 44. Mostly on collection Hashmap linkedhashmap. Java exception handling. Reenterant and
- 45. readwrite lock. Streams. Threadpoolexecutors.
- 46. Bean scope
- 47. Types of cache in hibernate
- 48. Stream api
- 49. Java 8 features
- 50. Indexes from db
- 51. Java 8 foreach vs advanced for loop
- 52. Executor framework
- 53. How to access two interfaces with same method with a class
- 54. Design problem with large data to be read persisted and again stored in queues, how to do so
- 55. Spring batch questions
- 56. Cached thread pool and fixed thread pool
- 57. Bean injection
- 58. Db queries on joins
- 59. Private variables accessing in other class where the other class is injected with autowired
- 60. Diamond problem
- 61. Functional Interface, Java Stream API, Concurrent HashMap, putifabsent(), RedBlack tree
- 62. internal structure, Why choose RedBlack tree?, Reject policy in Multithreading, how to
- 63. implement abort policy and what is the default policy, Semaphore, Blocking queue, spring
- 64. dependency injection, private autowired, spring transaction, db index, Design problem with large data to be read persisted and again stored in queues. how to do so,
